Groundbreaking

The New Hurricane Deck Bridge

- The new Hurricane Deck bridge will be located on the east side of the existing structure. The new bridge will be wider to include two 12-foot driving lanes with seven foot shoulders on each side.
- Construction began in spring 2012 and the new bridge will be open to traffic in late 2013. The entire project, including demolition of the existing structure, will be completed in spring 2014.
- The existing bridge will remain open to traffic during construction of the new structure. However, some occasional lane closures on Route 5 and across the existing bridge should be expected.
- The new bridge will cost \$32.3 million. American Bridge Company of Overland Park, Kansas is the contractor on the project.
